

Performance Analysis and Match Insights: T20 World Cup 2026

:- POTHINENI NAVEEN

Project Goals

1. Performance Analysis of Teams.
2. Player Performance Evaluation.
3. Match Outcome Insights.
4. Over-wise Run Analysis.
5. Venue-Based Analysis.
6. Visualization & Reporting.

Description

- This project analyzes data from the **ICC Men's T20 World Cup 2026** to understand how teams and players perform during matches. The goal is to turn raw match data into useful insights that help explain:
 - ➡ Which teams are performing well
 - ➡ Which players are making the biggest impact
 - ➡ What factors influence match outcomes
 - ➡ Use following slides for discussing status, schedules, budget, etc.

Technology

1.SQL (Structured Query Language)

- ✓ Used to analyze and extract insights from data

2.Power BI

- ✓ Used to create visual dashboards

3.Data Source (Kaggle Dataset)

- ✓ Provides real-world cricket match data

Data Cleaning & Preparation

- 1. Handling Missing Values
- 2. Removing Duplicates
- 3. Fixing Inconsistent Names
- 4. Data Type Correction

In this project, ICC MEN'S WORLD dataset was carefully cleaned and prepared before performing any analysis. Missing values were handled, duplicate records were removed, and team/player names were standardized to ensure consistency.

Total Participating Teams in World cup:-

```
SELECT COUNT(DISTINCT team) AS total_teams  
FROM (  
    SELECT team1 AS team FROM matches  
    UNION  
    SELECT team2 FROM matches  
) AS all_teams;
```

	total_teams
▶	20

Total venues:-

```
SELECT COUNT(DISTINCT venue) AS total_venues  
FROM matches;
```

	total_venues
▶	8

Most Successful Team

- ```
SELECT winner, COUNT(*) AS total_wins
FROM matches
WHERE winner IS NOT NULL
GROUP BY winner
ORDER BY total_wins DESC;
```

|   | winner       | total_wins |
|---|--------------|------------|
| ▶ | India        | 9          |
|   | New Zealand  | 6          |
|   | England      | 6          |
|   | South Africa | 6          |
|   | Pakistan     | 4          |
|   | West Indies  | 4          |
|   | Sri Lanka    | 4          |
|   | No Result    | 3          |
|   | Scotland     | 2          |
|   | Netherlands  | 2          |
|   | Australia    | 2          |
|   | Canada       | 2          |
|   | Zimbabwe     | 1          |
|   | Nepal        | 1          |
|   | Ireland      | 1          |
|   | USA          | 1          |
|   | Afghanistan  | 1          |

## Venue-wise Match Count

- ```
SELECT venue, COUNT(*) AS total_matches
FROM matches
GROUP BY venue
ORDER BY total_matches DESC;
```

	venue	total_matches
▶	R. Premadasa Stadium	12
	Wankhede Stadium	8
	Eden Gardens	7
	M.A. Chidambaram Stadium	7
	Narendra Modi Stadium	7
	Pallekele Cricket Stadium	7
	Arun Jaitley Stadium	6
	Sinhalese Sports Club	1

Venue located country and capacity

```
• SELECT
    toss_winner,
    COUNT(*) AS matches,
    SUM(CASE
        WHEN toss_winner = winner THEN 1
        ELSE 0
    END) AS toss_win_matches
FROM matches
GROUP BY toss_winner
ORDER BY toss_win_matches DESC;
```

	venue_name	city	country	capacity
▶	Narendra Modi Stadium	Ahmedabad	India	132000
	Wankhede Stadium	Mumbai	India	33000
	Eden Gardens	Kolkata	India	68000
	M.A. Chidambaram Stadium	Chennai	India	50000
	Arun Jaitley Stadium	Delhi	India	41000
	R. Premadasa Stadium	Colombo	Sri Lanka	35000
	Sinhalese Sports Club	Colombo	Sri Lanka	10000
	Pallekele Cricket Stadium	Kandy	Sri Lanka	35000

Bat First VS Chase First, wins

- ```
SELECT
 toss_decision,
 COUNT(*) AS total_matches,
 SUM(CASE
 WHEN toss_winner = winner THEN 1
 ELSE 0
 END) AS wins
FROM matches
GROUP BY toss_decision;
```

|   | toss_decision | total_matches | wins |
|---|---------------|---------------|------|
| ▶ | bat           | 15            | 14   |
|   | field         | 15            | 11   |
|   | NA            | 25            | 22   |

- Teams batting first recorded a higher win percentage than teams bowling first.
- Scoreboard pressure and pitch deterioration may contribute to this trend.
- The data suggests batting first can provide a tactical advantage in T20

## Stage performance analysis

```
• SELECT
 stage,
 winner,
 COUNT(*) AS wins
FROM matches
GROUP BY stage, winner
ORDER BY stage, wins DESC;
```

- Some teams dominated group stages but underperformed in knockout matches.
- Successful teams maintained consistency under high-pressure situations.
- Teams showed different performance levels across tournament stages.

|   | stage       | winner       | wins |
|---|-------------|--------------|------|
| ► | Final       | India        | 1    |
|   | Group       | India        | 4    |
|   | Group       | New Zealand  | 4    |
|   | Group       | England      | 4    |
|   | Group       | Sri Lanka    | 4    |
|   | Group       | Pakistan     | 3    |
|   | Group       | West Indies  | 3    |
|   | Group       | South Africa | 3    |
|   | Group       | Scotland     | 2    |
|   | Group       | Netherlands  | 2    |
|   | Group       | Australia    | 2    |
|   | Group       | No Result    | 2    |
|   | Group       | Canada       | 2    |
|   | Group       | Zimbabwe     | 1    |
|   | Group       | Nepal        | 1    |
|   | Group       | Ireland      | 1    |
|   | Group       | USA          | 1    |
|   | Group       | Afghanistan  | 1    |
|   | Semi-Final  | New Zealand  | 1    |
|   | Semi-Final  | India        | 1    |
|   | Super Eight | South Africa | 3    |
|   | Super Eight | India        | 3    |
|   | Super Eight | England      | 2    |
|   | Super Eight | No Result    | 1    |
|   | Super Eight | West Indies  | 1    |

## Teams Winning Most Under Pressure

- **SELECT**

```
 p.team,
 COUNT(*) AS knockout_wins
FROM points_table p
JOIN matches m
ON p.team = m.winner
WHERE m.stage IN ('Semi-final', 'Final')
GROUP BY p.team
ORDER BY knockout_wins DESC;
```

|   | team        | knockout_wins |
|---|-------------|---------------|
| ▶ | India       | 4             |
|   | New Zealand | 2             |

Performance in knockout matches revealed a team's ability to handle pressure, which proved more critical than group-stage dominance alone.

## High Net Run Rate and Qualified teams

```
• SELECT
 team,
 CAST(net_run_rate AS DECIMAL(5,2)) AS nrr
FROM points_table
ORDER BY nrr DESC;
```

|   | team         | nrr  |
|---|--------------|------|
| ▶ | India        | 3.12 |
|   | India        | 2.80 |
|   | England      | 2.50 |
|   | South Africa | 2.00 |
|   | Sri Lanka    | 1.95 |

```
5 • SELECT
7 qualified,
3 COUNT(*) AS teams
3 FROM points_table
3 GROUP BY qualified;
```

|   | qualified | teams |
|---|-----------|-------|
| ▶ | Yes       | 8     |
|   | No        | 16    |
|   | Yes - SF  | 4     |

# Most Concistent Teams

```
1 • SELECT
2 team,
3 won,
4 lost,
5 no_result,
6 points
7 FROM points_table
8 ORDER BY won DESC, lost ASC LIMIT 5;
```

|   | team         | won | lost | no_result | points |
|---|--------------|-----|------|-----------|--------|
| ▶ | India        | 5   | 0    | 0         | 10     |
|   | England      | 5   | 0    | 0         | 10     |
|   | Pakistan     | 4   | 1    | 0         | 8      |
|   | Sri Lanka    | 4   | 1    | 0         | 8      |
|   | South Africa | 4   | 1    | 0         | 8      |

## Team Consistency Analysis

- Teams with consistent wins achieved higher tournament rankings.
- Lower loss counts contributed significantly to qualification chances.
- Consistency across matches was a key factor in overall tournament success.

Sum of LOST and Sum of WON by Team

# Top 5 Most competitive Teams

```
• SELECT
 team,
 won,
 lost,
 ABS(won - lost) AS performance_gap
FROM points_table
ORDER BY performance_gap desc limit 5;
```

|   | team    | won | lost | performance_gap |
|---|---------|-----|------|-----------------|
| ► | India   | 5   | 0    | 5               |
|   | Namibia | 0   | 5    | 5               |
|   | Oman    | 0   | 5    | 5               |
|   | England | 5   | 0    | 5               |
|   | Italy   | 0   | 5    | 5               |

## Competitive Team Analysis

- Many teams showed closely balanced win-loss records.
- Consistency in crucial matches played an important role in qualification outcomes.
- Small performance differences significantly affected tournament rankings.

# Venue Success Analysis

```
3 • SELECT
4 m.venue,
5 m.winner,
6 COUNT(*) AS wins
7 FROM matches m
8 GROUP BY m.venue, m.winner
9 ORDER BY wins DESC limit 10;
```

|   | venue                     | winner       | wins |
|---|---------------------------|--------------|------|
| ▶ | M.A. Chidambaram Stadium  | New Zealand  | 3    |
|   | R. Premadasa Stadium      | Pakistan     | 2    |
|   | Eden Gardens              | West Indies  | 2    |
|   | Wankhede Stadium          | India        | 2    |
|   | Wankhede Stadium          | England      | 2    |
|   | R. Premadasa Stadium      | Sri Lanka    | 2    |
|   | Eden Gardens              | England      | 2    |
|   | Pallekele Cricket Stadium | Sri Lanka    | 2    |
|   | Narendra Modi Stadium     | South Africa | 2    |
|   | R. Premadasa Stadium      | India        | 2    |

Venue conditions influenced match outcomes, making adaptability an important factor in tournament performance

## ▪ Conclusion:-

- Team consistency and strategic decisions strongly influenced tournament outcomes.
- Toss decisions, venue conditions, and Net Run Rate impacted qualification chances.
- SQL analysis helped uncover meaningful insights from tournament data.

This project demonstrates how data analysis can transform raw match statistics into meaningful strategic insights.
